

# ARK-LES

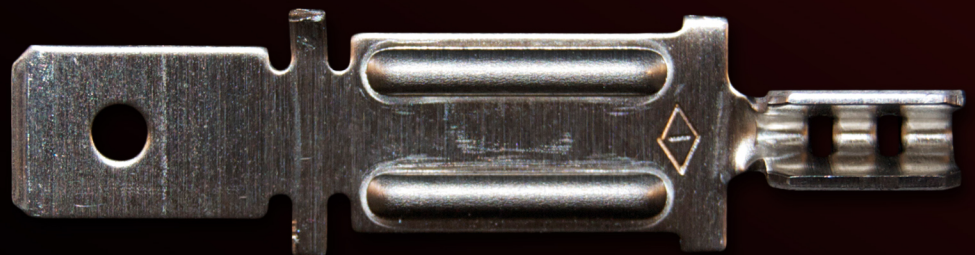

## CONNECTORS

- Custom connector design
- Rapid Prototype services
- In press assembly using multiple materials
- Automated off-line assemblies
- Screw and terminal assemblies
- Silver wire insert stamping
- Ark-Les engineered and built tooling
- Connector, terminal and wire attaching equipment
- Custom packaging, side by side on reel, or loose piece
- Full laboratory for UL 310 testing and development of connectors
- Innovative solutions to difficult interconnect problems.

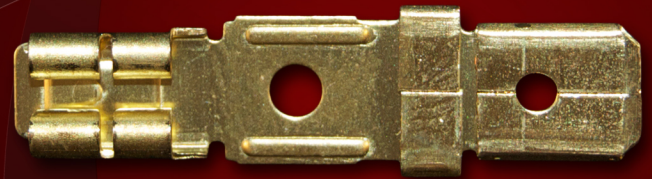

Ark-les Connectors operation is expansive in our custom stamping experience. We also produce a vast array of commodity terminals for many types of use. The 487 documents that are available on our web site represent less 25% of our connector offering, not to mention the vast array of electric / electronic components we have designed and tooled in our 71 years. Our product offering is not limited to the content of our catalog.

**Heater Tab: Steel tab heater used in white goods industry**

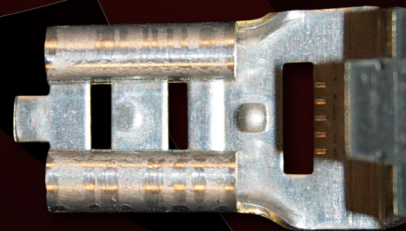

**Bullet: Broad range of crimp-able bullets**

**2-Sided Transition Piece: Transition adapter to adapt any size male to any size female.**

**Packard: Brand new tooling for a low cost production**

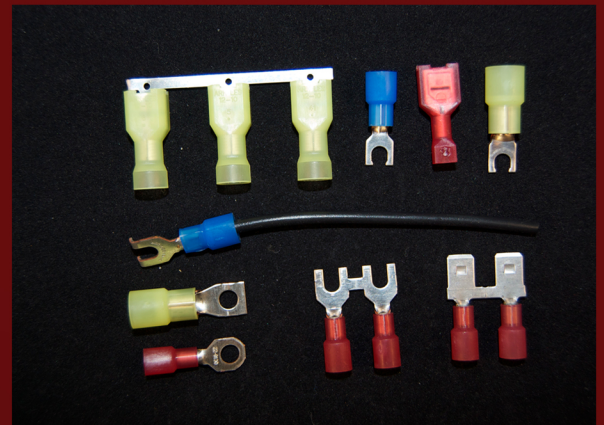

**Flag: Customizable rolled rail flag for difficult tab configurations**

Ark-Les is dedicated to service. We manufacture in Stoughton Massachusetts and look to gain market share by offering superior service and rapid responses to quotes. Additionally we are problem solvers utilizing 71 years of manufacturing experience, using a hands on approach to resolving applications headaches.

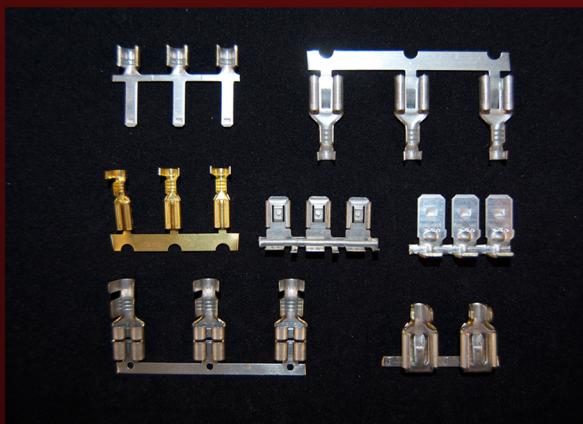

Ark-Les Uses modern automated production lines, to produce millions of precision units per day. We develop and offer our own application tooling in house. The terminals and connectors offered are available on a continuous side by side metal carrier. They are made in the traditional "T" and "Mid" style carriers. They are then crimped using Ark-Les crimping presses and universal applicators for high speed, low cost production.
